

ascertaining whether said message corresponds to a *bona fide* access request;
when said step of ascertaining determines that said message corresponds to a *bona fide* access request, entering an active state;
communicating a prompt message to said first port;
receiving a response code from said first port;
receiving a message from said first port; and
storing said message.

44. (Original) The method of claim 43 wherein said step of storing said message includes a step of decrypting the message received from said first port.
